

**ROBUSTA**  
STEP FORWARD

**HEALTH AND PHARMACEUTICAL INDUSTRY**

**JANUARY 2022**

At ROBUSTA, we manufacture **safety and professional solutions** since 1999. We develop extraordinarily long-lasting and comfortable footwear and accessories tailored to the needs of our customers, in accordance with a commitment to permanent service and a strict quality plan. The result is a very extensive catalogue with **more than 750 SKUs** that meet the needs of professionals in multiple industries.

A work process combining an in-depth **study of the industry and comprehensive biomechanical experiments** have led us to create a collection specifically designed for professionals in the Pharmaceutical Industry and various fields in the Health Sector, including Healthcare, Pharmacies, Orthopaedics and Nursing Homes.

The result is a collection of professional footwear featuring highly breathable, lightweight, durable models with antistatic, non-slip soles and a design that helps combat fatigue by offering maximum comfort and rest.

## LEAVE A FOOTPRINT, BUT NOT ENVIRONMENTAL

At Calzados Robusta we know that the quality of our life at work significantly depends on our environment. That is why we are committed to preserving and caring for the environment by progressively reducing the environmental footprint of our processes. This commitment to sustainability incorporates **eco design** as a strategic competitiveness factor to optimize processes and reduce environmental impact throughout the product life cycle (UNE 14040 - UNE 150301). It is a global process that not only involves the use of green materials, but also the most sustainable ways of producing, storing and shipping our goods to clients.

We control and reduce VOC emissions and discharges, offset part of our carbon footprint with the "Calculate, Reduce and Compensate" programme of the Spanish Ministry for Ecological Transition and contribute to the Sustainable Development Goals.

## WHERE SAFETY BEGINS

Professional footwear for the industrial sector is a fundamental component of protective equipment. Not only do employees' safety depend on it, but also their performance and daily well-being.

At ROBUSTA we are highly aware of the importance of developing the best products for each sector; products that respond to specific needs as well as innovative products that anticipate possible contingencies in the workplace, even before they occur.

Our teams partner with **INESCOP**, to test each new **RDI** development, and the performance of all our designs in our laboratory in Arnedo, La Rioja.

The result is a collection of comfortable, lightweight, safety, protective and uniform footwear designed to suit various industries: **Health, Food, Special Risks, Catering, Security Forces, Forest Industry and Firefighting.**

## **EUROPEAN STANDARDS**

### **EN ISO 20344**

It sets out the requirements and test methods for safety, protective and occupational footwear for professional use.

### **EN ISO 20345**

It sets out the specifications for safety footwear for professional use, with toecaps designed to resist an impact at an energy level of 200 joules and a compression of 15 kN.

### **EN ISO 20346**

It sets out the specifications for protective footwear for professional use, with toecaps designed to resist an impact at an energy level of 100 joules and a compression of 10 kN.

### **EN ISO 20347**

It sets out the specifications for occupational footwear for professional use.

## DESIGNATORS

### Safety footwear for professional use without toecap protection, as per ISO 20347 standard

---

#### 01= OB + A + E

Closed seat region

**OB=** Basic requirements.

**A=** Antistatic footwear. It dissipates static electricity produced by movement and activity to the ground.

**E=** Energy absorption of seat region. Soft heel support surface. Prevents fatigue and joint injuries.

**FO=** Hydrocarbon resistant sole.

Optional requirement met by all our models.

---

#### 02=01 + WRU

**WRU=** Resistance of the upper against water penetration and absorption. Liquid repellent.

---

#### 03=02+P= 01 + WRU + P + CLEATED OUTSOLE + CLEAT SOLE DESIGN

**P=** Sole penetration resistance.

**SRA=** Slip resistance on ceramic tile surface with a soapy sodium lauryl sulphate solution (flat and heel).

**SRB=** Slip resistance on steel surface with glycerine (flat and heel).

**SRC=** Slip resistance on both surfaces.

### Safety footwear for professional use with toecap protection, as per ISO 20345 standard

---

#### S1=SB + A + E

Closed seat region

**SB=** Basic requirements

**A=** Antistatic footwear. It dissipates static electricity produced by movement and activity to the ground.

**E=** Energy absorption of seat region. Soft heel support surface. Prevents fatigue and joint injuries.

**FO=** Hydrocarbon resistant sole.

Optional requirement met by all our models.

---

#### S2= S1 + WRU

**WRU=** Resistance of the upper against water penetration and absorption. Liquid repellent.

---

#### S3= S2+P = S1+WRU+P+ CLEATED OUTSOLE + CLEAT SOLE DESIGN

**P=** Sole penetration resistance.

**SRA=** Slip resistance on ceramic tile surface with a soapy sodium lauryl sulphate solution (flat and heel).

**SRB=** Slip resistance on steel surface with glycerine (flat and heel).

**SRC=** Slip resistance on both surfaces.

## INTERIOR HEIGHT OF MODELS

The interior height indicated on each model is the height of the heel, without insole, at its highest point.
